

MUHAMMAD ZUBAIR

Full-Stack Web Developer

✉ zzubairahmed402@gmail.com 📞 923123232695 📍 house 648, street 44 , G9/1 , Islamabad

🔗 LinkedIn

SUMMARY

Results-driven Full-Stack Developer with 4+ years of experience building AI-powered SaaS products, RESTful APIs, and scalable web applications. Node.js Team Lead with a track record of shipping production apps and growing developer tools to 3,000+ users.

EXPERIENCE

KhyberKicks, *Founder & Owner*

01/2024 – 04/2024 | Pakistan

- Launched and managed an ecommerce brand specializing in shoes and sandals, achieving a 20% increase in sales within the first quarter.
- Designed and maintained custom Shopify stores, enhancing user experience and streamlining operations.
- Implemented digital marketing campaigns on Facebook, TikTok, and Instagram, resulting in a 30% increase in online engagement.
- Conducted dropshipping operations, integrating ecommerce tools for seamless order management.

Mayaar Marketing, *HTML Developer*

01/2022 – 02/2023 | UNITED STATES

- Developed ebooks using HTML, for a U.S.-based client, ensuring cross-device compatibility and visual appeal.
- Collaborated with the design team to create engaging and user-friendly digital content.

CodeCrafters, *Node.js Team Lead*

08/2021 – 12/2021 | Remote

- Leading a team of developers to build scalable Node.js applications.
- Designed backend architecture and ensured code quality through rigorous testing and reviews.
- Mentored junior developers in best practices and agile methodologies.
- Collaborated with the front-end team for seamless integration of APIs and UI components.

Quantabyte, *Full Stack Developer*

03/2021 – 08/2021 | Pakistan

- Developed and maintained web applications using modern front-end (Reactjs, HTML, CSS), and back-end (Nodejs, Expressjs) technologies.
- Designed and implemented RESTful APIs for seamless integration between front-end and back-end systems.
- Optimized application performance and scalability through code refactoring and best practices.
- Collaborated with cross-functional teams to deliver high-quality, secure, and scalable solutions.

- Managed version control and CI/CD pipelines using Git and deployment tools.

EDUCATION

Bahria University Islamabad, *Degree in Bachelor of Science in Computer Science (Informatics Technology)* 09/2022 – Present
GPA: 3.98

Bahria College Islamabad, *Degree in Pre-Engineering (F.Sc.)* 08/2020 – 07/2022
Percentage: 75%

Bahria College Islamabad, *Degree in Matriculation* 06/2018 – 07/2020
Percentage: 89%

SKILLS

Programming Languages — JavaScript, HTML, CSS, Python, Java, **Frameworks** — Expressjs, jQuery, React Js, Tailwind CSS, GSAP, Reactjs, Next Js, SpringBoot, **Tools / Platforms** — GitHub, Git, GitHub Actions, Selenium, Docker, Postman, Vs Code, **Databases** — SQL, MongoDB, Firebase, PostgreSQL

PROJECTS

DevPost AI (SaaS – In Production) [🔗](#), *Link Node.js*, 01/2026 – 01/2026
Express.js, MongoDB, OpenAI API, n8n, Vercel, Railway, Lemon Squeezy, LinkedIn API

Developed an AI-powered SaaS platform that automatically generates high-quality LinkedIn posts for developers, founders, and professionals. The platform allows users to publish posts directly through LinkedIn API automation or manually schedule content for better engagement.

Built with Node.js and Express.js for backend services and MongoDB for secure data storage.

Integrated OpenAI API for intelligent content generation and used n8n for workflow automation.

Implemented secure authentication and scalable deployment using Vercel and Railway.

Integrated Lemon Squeezy for subscription-based payments and monetization. Focused on automation, clean UI/UX, and reducing content creation time by over 80%. The application is production-ready and designed for scalable growth.

MicroLearning Platform Full Stack AI-Powered Application, *LinkFlurner, Dart, Node.js, Express, Spring*

Boot 3, Java 17, OpenAI API, Supabase (PostgreSQL),

Firebase FCM, Docker, JWT

- Developed a full-stack AI-powered microlearning platform that converts documents (PDF, DOCX, TXT) into 60-second interactive learning modules using AI-generated flashcards, quizzes, and gamified progress tracking.
- Key Contributions & Features:
- Built a cross-platform Flutter mobile app with Material Design 3, smooth animations, and responsive layouts.
- Implemented AI-driven content generation using OpenAI GPT-3 to create flashcards and quizzes automatically.

- Designed RESTful APIs using Node.js/Express and Spring Boot (Java 17) for a scalable backend servers
- Developed secure authentication using Supabase Auth, JWT, and Spring Security
- Implemented rate limiting (Dudot(j), CORS, and stateless session management
- Enabled document processing using Apache PDFBox, Apache POI, and OCR support
- Integrated Firebase Cloud Messaging for reminders, streak alerts, and achievement notifications
- Built a gamification system with XP, streaks, badges, leaderboards, and analytics dashboard

SigCoin Mining Web Application, *Link JavaScript, EJS,*

MongoDB, Express, JWT, Tailwind CSS, GSAP, Nextjs, Docker

- SigCoin is a cryptocurrency mining application I developed. The application allows users to earn virtual coins by watching ads and engaging in mining sessions. It is designed to simplify cryptocurrency mining for beginners, offering a user-friendly interface to monitor real-time progress, track rewards, and redeem coins (1 SigCoin = \$0.50).
- The project was built with React for the frontend and Node.js with Express for the backend. Initially, the database was implemented using MongoDB, which was later migrated to SQL with XAMPP for improved relational data handling. User authentication was secured with JWT and bcrypt, ensuring data privacy and secure access. Additionally, I containerized the backend APIs using Docker, enabling consistent deployment and scalability across various environments.
- The application includes APIs for starting and stopping mining sessions, tracking real-time progress, claiming rewards, and earning mining credits through ad interactions. Automated testing was conducted using Selenium, and I configured CI/CD pipelines with GitHub Actions to streamline testing and deployment. The project is production ready and deployed on Render. Throughout the development process, tools like Postman, VSCode, and GitHub were used to ensure seamless API testing, development, and version control. This project demonstrates expertise in modern web development, secure authentication, API design, and scalable deployment.

Upwork AI Proposal Generator,

Link Next.js, Tailwind CSS, Node.js, Express.js

- Developed an AI-powered platform that automatically generates personalized Upwork proposals based on user resumes and job descriptions.
- Built with Next.js and Tailwind CSS for a fast, responsive, and clean UI/UX.
- Implemented Node.js and Express.js to handle API requests and integrate AI models for content generation.
- Added dynamic proposal templates across multiple service categories (Development, Writing, Media, etc.).
- Focused on intuitive UX and automation, reducing proposal writing time by over 90%.

VS Code Productivity Extensions (3,000+ Users Each),

01/2026 – 02/2026

Link JavaScript, Node.js, VS Code API

Developed two Visual Studio Code extensions designed to enhance developer productivity by triggering a specific custom sound whenever a terminal error occurs. The extensions help developers instantly notice runtime or compilation errors without constantly monitoring the terminal output.

Built using JavaScript and the VS Code Extension API, focusing on lightweight performance and seamless integration with the development environment. Each extension crossed 3,000+ active users, demonstrating strong community adoption and practical developer impact.

Additionally, a promotional demo video showcasing the extensions surpassed 1 million views, significantly increasing visibility and user growth.

Deployment of Full-Stack Rag Application, [Link](#)

Rust/API, Python, Pydantic, Anyinc/Any 3, CilantroBERT, FinBERT, OpenAI API, Reportlab, PyPDF2, Redis/Neu-Vs, Tailwind CSS, Render, Git/GitHub, Cuban Error Handling & Logging.

- I successfully migrated two Flask services (app.py and eng.py) to RustAPI and consolidated them with an existing Rust API service (mein.py), transforming Flask routes into Rust API endpoints and unifying three separate services into a single, efficient application, reducing system complexity by 66%.
- I deployed the consolidated Rust API application on Render, ensuring seamless integration, high availability, and production-readiness. The project included implementing comprehensive error handling, logging, and CORS middleware for cross-origin requests. I enhanced AI integration by incorporating multiple AI models such as CilantroBERT and FinBERT for comprehensive ESG analysis and document context awareness, along with adding real-time document analysis and interactive chat functionality. On the technical side, I converted Flask-specific code to FastAPI patterns, implemented Pydantic models for input validation, optimized performance, and added streaming responses for chat and PDF generation. I also improved file handling with strict size and time limits, strengthening overall security. This migration significantly improved response times, enhanced the user experience with new integrated features, and made the application production-ready, scalable, and reliable.

Travel City Tracker and live map, [PostgreSQL, SVG,](#)

Express, Node.js, EJS, Body-Parser, CSV Import Travel Tracker

- A web application designed to help users keep track of the countries they've visited. This project integrates various modern web development technologies to provide an interactive and user-friendly experience.
- PostgreSQL: Database integration; Efficiently manages and stores data related to visited countries.
- SVG for Country Outlines: Dynamically renders and highlights visited countries on a world map.
- Express & Node.js: Handles routing, and data management on the backend.
- EJS Templating: Renders dynamic content on the frontend for an up-to-date user experience.
- Body-Parser Middleware: Seamlessly processes and handles form submissions.
- CSV Data Import: Simplifies adding multiple entries through CSV files containing country names and notes.
- Responsive Design: Ensures accessibility and visual appeal across all devices.

2D Sword Fighting Game, [C++, OOP, QT, SFML](#)

- Developed an immersive 2D sword fighting game utilizing, the power of C++, the Qt framework, and the Simple and Fast Multimedia Library (SFML). The project showcases advanced object-oriented programming (OOP) concepts to deliver a rich and engaging gaming experience. The game stands out for its detailed character animation, dynamic health management system, and responsive gameplay mechanics.

Messaging App Using Sockets,

Link Python, Tkinter, Socket Programming

- I developed a full-stack social media application using Python and Tkinter, incorporating real-time features and a modern UI/UX design. The application follows a client-server architecture, implemented socket programming to enable real-time communication and data synchronization. Key features include a user authentication and profile management system, a real-time chat system with message persistence, image upload and sharing functionality, and a friend request system with accept/reject capabilities. The user interface was designed using CustomTkinter, taking inspiration from Instagram for a clean and modern look. For local data persistence, JSON files were used to store user data, posts, and messages. On the technical side, I utilized multi-threaded server handling to manage multiple client connections efficiently, implemented secure user authentication and data management practices, ensured responsive UI performance with dynamic content loading, and incorporated efficient image processing and storage mechanisms to enhance the overall user experience.

Live Stock Simulator, Link C++, QDA

- Developed a real-time stock analyzer simulator using C++ in a Rapid Application Development (RAD) environment. This project demonstrates a deep understanding of Data Structures and Algorithms (DSA) to efficiently manage and analyze real-time market data.

Drum Kit, BMI Calculator, Link JavaScript, jQuery, DOM

- Designed and implemented a BMI (Body Mass Index) calculator using HTML, CSS, and JavaScript. The calculator takes user input for weight and height, computes the BMI, and categorizes the result into underweight, normal weight, overweight, or obese based on standard British guidelines. Utilized DOM manipulation for dynamic updates and responsive design principles for compatibility across various devices.

E-Commerce Website, Link JavaScript, React, Nodejs,

Expressjs, JWT, MongoDB, Bcrypt

- This project integrates a secure login page with an E-Commerce website, including user registration, login, and access to exclusive content. Utilizing JWT (JSON Web Tokens) for authentication, it ensures safe user sessions while bcrypt is employed for hashing passwords. User data, including email and password, is stored in MongoDB, maintaining security and accessibility. The frontend is developed using React, while EJS (Embedded JavaScript) is used for server-side rendering. The application follows an MVC (Model-View-Controller) architecture for efficient data management and routing. Key features include error handling for user authentication, account management only on logged-in users, and structured installation and messaging.

NewsPaper Website,

Link JavaScript, Node.js, APIs, React, Tailwind CSS

- Developed a dynamic news website that fetches real-time news articles using the News API.
- Implemented React Router for seamless navigation between different news categories.
- Utilized Axios for efficient API calls and data fetching.
- Designed a responsive and visually appealing UI using Tailwind CSS.
- Optimized performance with React state management and efficient API handling.

Bloggging Website, *Link React, Nodejs, Expressjs, MongoDB, JWT, bcrypt, Tailwind CSS, Vite, Render*

- Developed a full-stack blogging website using React, Nodejs, Express, and MongoDB, allowing users to create, read, update, and delete (CRUD) blog posts. Implemented JWT Authentication for secure login, bcrypt for password hashing, and used MongoDB Atlas for cloud-based database storage. Integrated file uploads for blog images and ensured a responsive, user-friendly UI with Tailwind CSS. The website features an interactive blog detail page, an edit card component, and role-based access, allowing users to modify their own blogs. Deployed on Render for seamless hosting.

MLSA Microsoft Chapter Website, *React-based Web*

Application | Link React.js, JavaScript, HTML, CSS

- Designed and developed a dynamic and responsive website for the Microsoft Learn Student Ambassadors (MLSA) chapter.
- Showcased organizational details, team structure, individual team member profiles, and comprehensive chapter member information.
- Implemented reusable React components for efficient rendering of team and event sections.
- Ensured user-friendly navigation and responsive design for seamless access across devices.
- Collaborated with chapter members to accurately reflect branding and content requirements.

CERTIFICATIONS

Certified Ethical Hacker (CEH), *EC-Council*

08/2025 – 01/2026

Ethical Hacking Fundamentals, *Coursera*

JavaScript Certification, *KG Coding*

Full-Stack Web Developer: HTML, CSS, Javascript, Node, React, PostgreSQL, Web3 and DApps, *Udemy*,

Javascript Certification Course, *Programming Hub*

Nodejs and Expressjs Certification, *Programming Hub*

C++ Object-Oriented Programming (OOP) and STL

skills: C++14 & C++17, *Udemy*

Qt Workshop, technical Support,

Yoza Balria University Islamabad.

Compete 2024 Participation Certificate,

Comsats University Islamabad.

HONORS & AWARDS

Alpha Competitive Programming Contest, Bahria University

Participated in the Alpha Competitive Programming Contest, solving algorithmic and data structure-based problems under time constraints. Demonstrated strong problem-solving skills, logical thinking, and efficiency in implementing optimized solutions. Competed against peers in a high-pressure coding environment, strengthening analytical and debugging abilities.

ComPPEC KUST 2024 Participation Certificate, NUST

- Engaged in multiple competitive programming competitions, showcasing problem-solving skills and algorithmic proficiency.
- Created Shopify websites prior to formal HTML training, demonstrating early entrepreneurial and web development initiative.
- Developed various games, showcasing creativity and proficiency
- Google Developer Group (GDG) On Campus Member Provided web development services and mentorship.
- Microsoft Learning Student Ambassador Promoted tech learning and development initiatives.
